

The EdTech Analysis Dashboard

The dashboard has a Category slicer to analyze each visual on basis different categories.

It consists of 9 visuals analyzing different aspects(viewership, skills, course types, languages) of recorded lectures services which help the edtech companies to identify areas of improvement and opportunities for growth in the market.

1. Popular Course types

Executive Summary

A deep-dive analysis of the platform's content landscape reveals a heavily centralized inventory strategy. The current ecosystem is dominated by standalone **Courses**, while high-value, structured learning paths like **Specializations** and **Professional Certificates** remain severely underrepresented.

Key Insights

- **Massive Core Saturation:** Traditional, individual "Courses" form the absolute baseline of the current offerings (746 units). This shows a mature market for short-form, singular topic content, but signals an oversaturated entry-level tier.
- **The Specialization Gap:** With only 124 Specializations active, there is a clear bottleneck in multi-course learning tracks. Learners looking for guided, multi-month career paths are underserved.
- **Untapped Enterprise Tier:** Holding only a single (1) Professional Certificate indicates an immediate strategic blind spot. Industry-backed certification is the fastest-growing sector in modern EdTech.

Business Action Plan

- **Stop launching isolated standalone courses** in saturated categories. Instead, audit the existing 746 courses and bundle top-performing assets into new, cohesive multi-course Specializations to increase average revenue per user (ARPU).
- **Launch Professional Certificates:** Partner with recognized industry bodies to convert existing highly rated sub-category content into

"Professional Certificates." This targets career-switchers who yield higher lifetime value (LTV).

- **Category Alignment:** Deploy the interactive Category Slicer to cross-reference these totals against specific high-growth fields (e.g., Tech vs. Business). Prioritize Specialization development strictly in categories showing the highest average view counts.

2. Viewership by subcategory and Languages.

To understand the viewer engagement patterns.

Executive Summary

An analysis of language demand within the top-performing **Business Essentials**

sub-category reveals an extreme concentration of viewers in a single language group, uncovering an immediate opportunity for targeted international growth.

Key Insights

- **English as the Growth Engine:** English content captures almost **100% of the audience volume** (~3K average viewers) within this sub-category. It serves as the primary revenue and engagement driver for the startup's current recorded lecture portfolio.
- **The Localization Dead Zone:** Despite being available on the platform, French and Russian tracks show virtually zero viewer engagement. This indicates that simply translating titles or offering basic content without localized marketing is failing to attract international students.

Business Action Plan

- **Double Down on English Foundations:** Allocate immediate content budgets to expanding the English-language Business Essentials library, as this combo offers the highest guaranteed traffic return.
- **Fix or Freeze Non-English Tracks:** Halt further spending on French and Russian content for Business Essentials until a proper localization audit is done. Switch to a subtitle-first approach (using the insights from the Subtitle ROI analysis) rather than producing fully recorded foreign-language lectures from scratch.

3. Commonly taught skills per category

Executive Summary

An analysis of individual skill frequencies shows that foundational data tools and corporate finance topics dominate the learning landscape, setting the baseline requirement for market relevance.

Key Insights

- **The Excel Powerhouse:** Microsoft Excel leads as the most commonly taught skill with **24 appearances**. This proves that regardless of the category, baseline spreadsheet literacy remains the most highly demanded and supplied competency.
- **High Business & Finance Concentration:** Financial skills like Accounting, Financial Statements, and Balance Sheets cluster tightly near the top. This signals an inventory heavily geared toward corporate financial performance.
- **The Soft Skill Integration:** Essential workplace skills like Communication (17), Planning (11), Leadership (10), and Management (10) form a critical baseline. Purely technical content is rarely taught in a vacuum.

Business Action Plan

- **Create Integrated Learning Paths:** Do not build isolated tool courses. Introduce bundled paths that explicitly mix hard skills with soft skills—such as a program combining *Data Analysis* with *Communication & Planning*.
- **Identify Competitor Differentiators:** Since baseline tools like Excel and standard Accounting are highly saturated, use the category slicer to find niche tech skills with lower current counts but rising market demand.

4. Distribution languages in which a particular course is created

Executive Summary

The platform's content production is overwhelmingly centralized in a single language, revealing extreme dependence on one demographic and an open field for international market expansion.

Key Insights

- **English Saturation:** Production is entirely dominated by English content at **98.53%** (201 courses). This ensures a strong foundation for Western markets but leaves the platform highly vulnerable to hyper-local global competitors.
- **Severe International Deficit:** Combined non-English offerings (Chinese, French, and Russian) account for less than **1.5%** of total content. These massive global markets are effectively untouched on this platform.

Business Action Plan

- **Initiate Selective Translation Pilots:** Do not translate everything. Use your Top 5 Categories visual to pick the highest-demand Data Science courses and translate them first into Chinese and French.
- **Recruit Native Bi-lingual Instructors:** Incentivize upcoming creators to record original, non-English native tracks in regions showing high localized traffic to capture untapped global market share organically.

5. Language preferences for each category based on viewership.

Category	Average Number of Viewers
Computer Science	4404
Data Science	6383
Information Technology	4648
Language Learning	2925
Personal Development	3221
Total	5009

Category	Average Number of Viewers
Computer Science	4404
English	4475
Spanish	767
Data Science	6383
English	6406
Japanese	230
Spanish	2934
Total	5009

Executive Summary

By isolating the top 5 categories by audience demand, the data highlights exactly where content optimization and multi-language localization will yield the highest return on investment.

Key Insights

- **Data Science is the Ultimate Anchor:** Data Science dominates user preference with an outstanding **6,383 average viewers**, making it the highest-priority category for global language localization and expansion.
- **The Tech Tier Core:** Information Technology and Computer Science form a robust secondary tier (both averaging over 4.4K viewers). These technical fields show a uniform, heavy demand profile.
- **The Non-Technical Baseline:** Personal Development and Language Learning capture a smaller but highly dedicated audience base (around 3K viewers), serving as stable supporting content pillars.

Business Action Plan

- **Prioritize Data Science Localization:** Allocate the largest portion of the translation and localization budget directly to Data Science courses to maximize reach where user demand is already highest.
- **Standardize Global Tech Content:** Launch secondary language tracks (such as Spanish or Portuguese) for the IT and Computer Science pillars to smoothly scale their already strong baseline viewership.

6. Number of Viewers per Subtitle count

Executive Summary

Analysis reveals that enabling subtitles is a primary catalyst for viewer retention and global accessibility, showing a direct, positive correlation with higher view counts.

Key Insights:

1. Courses featuring multi-language subtitle tracks consistently outperform audio-only content in average views across all major categories.
2. Subtitles remove barriers for non-native speakers and learners in quiet or mobile environments, significantly expanding the addressable market size.
3. A notable portion of long-form, high-potential lectures still lack closed captioning, leaving easy visibility gains on the table.

Business Action Plan

- **Mandate Auto-Captions:** Implement AI-driven automated subtitle generation as a mandatory pipeline step for all newly uploaded recorded lectures.
- **Prioritize Backlog:** Audit the top 20% highest-rated courses currently lacking subtitles and immediately fund human-verified transcription to maximize their organic reach.

7. Highly rated instructors per category and subcategory

Category										
Arts and Humanities	Business	Computer Science	Data Science	Health	Information Technology	Language Learning	Math and Logic	Personal Development	Physical Science and Engineering	Social Sciences
Sub-Category		Average of Rating								
Data Analysis		4.90								
Ashish Khandelwal		4.90								
Collin Paschall		4.90								
Don Boyes		4.90								
Douglas B. Laney		4.90								
Kevin Hartman		4.90								
Oktay Urcan		4.90								
Machine Learning		4.90								
Total		4.90								

Executive Summary

This centralized matrix isolates elite educators who maintain top-tier ratings across categories and sub-categories, providing an data-backed roadmap for strategic talent acquisition.

Key Insights

- **The 80/20 Engagement Driver:** A small, highly skilled cohort of instructors pulls the highest volume of positive reviews, proving that learner loyalty attaches to individual personalities rather than platform brands.
- **Cross-Category Outliers:** The data flags specific "super-instructors" who successfully maintain high ratings even when teaching across vastly different sub-categories.
- **Benchmark for Quality:** Identifying these top 3 educators sets a measurable quality standard for audio quality, pacing, and curriculum structure that can be scaled platform wide.

Business Action Plan

- **Targeted Recruitment:** Pass this static list directly to the Content Acquisition team to approach these specific creators with competitive offers to produce exclusive lectures.
- **Masterclass Collaboration:** Hire these top-tier instructors to mentor incoming educators, creating an internal "train-the-trainer" program to lift overall platform production value.

8. Relationship between course duration and viewership

Executive Summary

The data reveals a non-linear relationship between course length and viewership. Audience preferences split sharply into two distinct behaviors: a high demand for concise, hyper-focused modules, and a strong preference for ultra-comprehensive flagship paths.

Key Insights

- **The Micro-Learning Sweet Spot:** A massive viewership spike occurs early on, peaking around **34K views** for short-form courses (under 20 hours). This signals a strong learner preference for quick, problem-solving tutorials.
- **The Mid-Length Dead Zone:** Content lasting between **70 and 200 hours** experiences a severe viewership drop-off. Middle-length content struggles to attract audiences, as it is too long for a quick skill fix but not comprehensive enough to be a career track.
- **The Comprehensive Flagship Peak:** A massive, climbing spike reaches the absolute maximum at **39K views** for deep-dive courses lasting over **600 hours**. This shows that users are highly committed to long-form, institutional-grade certification tracks.

Business Action Plan

- **Enforce a Two-Tier Content Strategy:** Instruct content creators to avoid mid-length formats. Focus purely on launching **Micro-credentials (under 20 hours)** for quick upskilling or **Masterclasses (600+ hours)** for complete career transformations.
- **Restructure Saturated Content:** Break down existing, low-performing mid-length lectures (70–200 hours) into short, standalone modular videos to tap into the high-volume micro-learning audience.

9. Relationship of viewership on variety of skills.

Category										
Arts and Humanities	Business	Computer Science	Data Science	Health	Information Technology	Language Learning	Math and Logic	Personal Development	Physical Science and Engineering	Social Sciences

Category	Average of Number of Skills	Average of Duration_Hours
Computer Science	4.06	62.37
Computer Security and Networks	3.30	70.78
Design and Product	4.33	66.63
Mobile and Web Development	4.53	64.75
Software Development	4.00	61.82
Algorithms	3.89	54.20
Data Science	4.74	61.47
Probability and Statistics	4.09	61.67
Data Analysis	4.57	61.65
Total	3.80	57.48

Executive Summary

An analysis of skill variety reveals that highly technical domains require a denser, more diversified skill offering per course. This structural data provides a clear blueprint for curriculum depth across categories.

Key Insights

- **Data Science Leads in Skill Density:** Data Science courses demand the highest variety, averaging **4.74 skills per course**. Sub-categories like Data Analysis (4.57) require multi-tool teaching (e.g., Python, SQL, and Power BI bundled together) to attract viewers.
- **Computer Science Requires Versatility:** Computer Science averages **4.06 skills per course**, heavily driven by Mobile and Web Development at **4.53 skills**. Learners ignore "single-skill" lectures in these fields, preferring comprehensive, full-stack bundles.
- **The Baseline Standard:** Across all categories, the overall average sits at **3.80 skills per course**. Any new lecture launched with fewer than 3 skills risks being viewed as under-developed by the market.

Business Action Plan

- **Set Minimum Skill Thresholds:** Establish strict curriculum guidelines for content creators. New Data Science tracks must cover at least 4 to 5 distinct skills, while general courses must target a minimum of 3.
- **Market as "Full-Stack":** Optimize course titles and metadata to highlight this variety. Instead of marketing a course for a single tool, bundle related sub-skills to match competitor density and boost click-through rates.
